April 29/29.

Dr. F. H. Sabin

New York, N.Y.

Dear Doctor Sabin:

Your chart is all right I think with the exception of the position of the Palysaccharide. Its present position would indicate that it is a cleavage product of the phosphatide - whereas it is an original cell constituent that was present in the alcohol-ether extract.

I think it would be better if you could list it at the bottom of your chart in a separate compartment in the same manner as you have done with the Living and Dead Tubercle Bacilli at the beginning of the chart.

My dear separate Cover Dam sending you 250 mg of the palysaccharide.

As to Newspaper reports - you may remember that I have already had two experiences of a

Very trying nature. One of the undesirable
features of newspaper stories of scientific work
is the number of letters that come - I inclose
one that came a day or two ago. Undoubtedly you
have had many of a similar nature.

Very sincerely

Rudolph. Anderson
